

FEL-PRO INSTALLATION TIPS

OIL PAN GASKET

Perma-Dry™

To effectively seal this sophisticated engine application, FEL-PRO has included PERMA-DRY™ molded rubber gasket(s) in this set.

CLEAN MATING SURFACES of all foreign material including old gaskets, RTV and oil. You may wish to use a degreaser such as PRO LINE® CLEAN OFF®.

CHECK PAN FLANGES for flatness. Straighten stamped metal pans. Replace if severely distorted. Distorted cast aluminum or plastic pans are difficult to straighten and should be replaced.

ATTACH AND ALIGN GASKET TO PAN.

IMPORTANT: This molded rubber silicone gasket must be installed **DRY** without any chemical adhesive.

REINSTALL OIL PAN TO ENGINE. Install cap screws, finger tight. Torque cap screws to OEM specifications. Over-torquing can distort pan and cause leakage.

TEST RUN ENGINE. Check all mating areas thoroughly to determine that all seals hold during operation.
